

**K. CLAIM OR CLAIMS:**

What I claim in my invention is:

1. A mechanism to secure Intramedullary Nails by using headless screws to interlock with the Intramedullary Nail with a canulated outer screw that engages the headless screw's threads and further locks onto the Intramedullary Nail. This process may be repeated contra laterally. This mechanism immobilizes the Intramedullary Nail to maintain fracture reduction and aids in centering of the IM Nail.
